Biomedical engineer from UC3M
Predoctoral Researcher at GTS-UC3M
with special interest in health data processing, machine learning and sustainability

Methodical and hard-working, with strong organizational, problem-solving, and code-design skills. My interests lie in applying AI (machine learning, deep learning) to address challenges in the biomedical and healthcare domains. I have experience across the full data pipeline — preprocessing, analysis, and visualization — as well as in software development and documentation.

My **programming experience** includes the analysis and modeling of human behavior in the context of suicide prevention, compartmental modeling of intracranial pulsatility, and the simulation of brain structures through spiking neural networks.

EXPERIENCE

UC3M | Predoctoral Researcher
Nov 2023 – Present · Leganés
Health data researcher and predoctoral student at the Signal Processing Group working in the field of human behavior analysis, focused on the development of AI-based methods to predict the risk of suicidal behavior.

Hanyang University | Research Intern
Feb–Jul 2022 · Seoul
Internship at the Neural Circuits & Computation Lab, where I modeled a spiking neural network to simulate the central complex in flying insects.

Self-employed | Private Tutor
2018–2023 · Madrid
Academic support in Mathematics, Physics and Chemistry to students in High School.

TEACHING

UC3M | Laboratory sessions about survival analysis, point processes and multi-view VAEs, in courses from the Bachelor in Data Science and Engineering and the Master in Applied Artificial Intelligence. 2025, 2026

UC3M | Tutoring sessions for an online course aimed at BBVA employees to develop skills in machine learning and feature engineering. 2026

COURSES

Machine Learning Summer School
UCSP · Arequipa · Lectures on advanced machine learning concepts: representation learning, diffusion, explainable AI, reinforcement learning.

WoW: Wealth out of waste
BEST · Lyon · Course about circular economy, waste revalorization and urban hydrology.

EDUCATION

Universidad Carlos III de Madrid
Master in Machine Learning for Health
2023–2024 · Leganés
I specialized in AI applications for medical data and image processing, including machine learning, deep learning, natural language processing and surgical navigation.

Bachelor's Degree in Biomedical Engineering
2018–2023 · Leganés
I gained expertise in diverse biomedical fields: image processing, biosensors, tissue engineering and more. My thesis focused on the creation of a compartmental model to investigate intracranial pulsatility, with the aim of understanding cerebrospinal fluid dynamics in different disorders.

Hanyang University | Exchange Program
2021–2022 · Seoul · Improved my English proficiency and gained adaptability and initiative.

Instituto Juan de la Cierva | Complementary Education
2009–2016 · Madrid · Participated in a program (PEAC) offered by the Community of Madrid as a voluntary, free, complementary education that enriches the standard curriculum and stimulates creativity and divergent thinking.

VOLUNTEERING

Iroko DFS | Project Climate Connect
Mar–Jun 2023 · Madrid · Collaboration on the European project *Climate Connect* to raise awareness about climate change through campaigns led by young students.

WWOOF | Assistant at O Fogar do Monte
2020 · Lugo · One week helping with agricultural and renovation activities in a local, organic farm.
